CONSTRUCTION NOTES

ATTENTION: UTILITY "WORK IN THE STREETS" PERMITS
FROM: DEPARTMENT OF PUBLIC WORKS–DIVISION OF RIGHT OF WAY MANAGEMENT – OFFICE OF THE PERMITS ENGINEER

1. ALL CUTS IN THE STREETS AND SIDEWALKS SHALL BE PERFORMED UNDER A PERMIT AND MONITORED BY THE PERMIT INSPECTOR. CONTRACTOR SHALL VERIFY SIZE, LOCATION AND DEPTH OF ALL EXISTING UTILITIES PRIOR TO CONSTRUCTION. CONTRACTOR IS RESPONSIBLE FOR REPAIRING ANY UTILITY DAMAGED DURING WORK.
2. WORK SHALL NOT COMMENCE UNTIL THE PERMIT INSPECTOR HAS BEEN NOTIFIED, A PRE–CONSTRUCTION CONFERENCE HELD AND MISS UTILITY CLEARS.
3. CUTS SHALL BE AS CLEAN AND STRAIGHT AS POSSIBLE, WITH NO OUTLINE DIMENSIONS LESS THAN 3 FEET WITHOUT SPECIAL APPROVAL OF THE DEPARTMENT'S INSPECTOR.
4. THE DETAILS OF TRENCHING CUTS FOR UTILITY STRIPS MUST BE SHOWN IN A TYPICAL SECTION ON THE DRAWINGS OR PROVIDED IN A SUBMITTAL WITH CONSTRUCTION NOTES SPECIFYING WIDTHS, DEPTHS, METHODS, MATERIALS, COMPACTION REQUIREMENTS AND PAVEMENT RESTORATION OF ABIDING BY THE DPW ATTACHMENT STANDARD.
5. ALL ASPHALT PAVEMENT RESTORATION THICKNESS SHALL BE 1 1/2 TIMES THE EXISTING SECTION OR A MINIMUM OF 8 INCHES WHICHEVER IS GREATER. SEE THE DPW TRENCH RESTORATION ILLUSTRATION FOR THE TYPICAL CONFORMANCE STANDARDS.
6. THE FINAL RESTORATION ON OPEN TRENCH CUTS REQUIRES THE DISTURBED ASPHALT PAVEMENT ZONE TO BE A SQUARE POINTED OFF AND STRAIGHT LINE. THE AREA OF PAVEMENT RESTORATION IS TO BE FULLY ENVELOPED BY THE FINAL SURFACE COURSE REPAIRS. THE ADJOINING SURFACE/TOP COURSE LAYER IS TO BE OVER–MILLED A MINIMUM DEPTH OF 1.25 INCHES OR MORE, A MINIMUM DISTANCE OF ONE FOOT BEYOND EACH SIDE OF THE TRENCH WALL. THIS STEP OUT IS TO OCCUR ALONG THE ENTIRE TRENCH LINE RUN AND/OR SQUARED POINTED AREA. CUTS INVOLVING CONTINUOUS NETWORK RUNS, WHICH EXCEED 350 FEET IN LENGTH OR TYPICALLY OVER ONE FULL CITY BLOCK, WILL BE CONSIDERED MULTIPLE BLOCK CUTS. ON MULTIPLE BLOCK CUT ZONES, THE OVER MILLING OF THE TRENCH LINE AND ADJOINING SURFACE COURSE LAYER MUST BE DONE WITH TYPICAL HIGH PRODUCTION ROADWAY COLD PLANNING EQUIPMENT. IN MULTIPLE BLOCK RESTORATION CASES, WHERE THE HIGH PRODUCTION COLD PLANNER IS REQUIRED, FINAL PAVING SHALL BE DONE BY A HIGH PRODUCTION HIGHWAY PAVER.
7. CONTRACTOR SHALL PROVIDE AND COORDINATE THE NECESSARY GEOTECHNICAL SERVICES FROM A QUALIFIED FIRM TO INSURE COMPACTION APPROVAL. APPROVAL OF IN–PLACE MATERIAL MUST BE FOLLOWED UP WITH A WRITTEN SUMMARY REPORT. COMPACTION REQUIREMENTS WILL BE REVIEWED FOR APPROVAL BY THE PERMITS ENGINEER OR HIS RESPRESENTATIVE.
8. ALL DISTURBED SIDEWALK AND CURB SHALL BE REPAIRED AND REPLACED IN ACCORDANCE WITH CITY STANDARDS.
9. ALL UTILITY CUTS ARE TO BE EXAMINED AND APPROVED BY THE APPROPRIATE UTILITY INSPECTOR/REPRESENTATIVE.
10. CONTRACTOR SHALL COORDINATE WITH THE CITY OF RICHMOND DPW 48 HOURS IN ADVANCE OF CLOSING TRAVELWAYS TO GENERAL VEHICULAR TRAFFIC. ALL TRAFFIC CLOSURES SHALL BE IN COMPLIANCE WITH THE 2011 VIRGINIA WORK AREA PROTECTION MANUAL (REVISION 2, DATED SEPTEMBER 1, 2019).
11. ENSURE STRUCTURE TOPS IN STREET AND SIDEWALK ARE ADJUSTED TO FINAL FINISHED GRADE.
12. CG–9D ENTRANCE APRONS SHALL INCLUDE GUTTER PAN ONLY IN AREAS WHERE SHOWN ON PLAN SHEETS. SEVERAL LOCATIONS MAY CONSIST CURB ONLY.

ROAD SUBGRADE

1. INSPECTION AND APPROVAL OF THE SUBGRADE WILL BE REQUIRED PRIOR TO THE PLACEMENT OF THE APPROVED PAVEMENT SECTION MATERIAL.
2. ANY CLAY DEPOSITS IN THE TOP TWO FEET OF THE SUBGRADE MUST BE REMOVED OR ADDRESSED AS RECOMMENDED BY THE GEOTECHNICAL ENGINEER.
3. SUBGRADE APPROVAL SHALL BE ACCOMPANIED BY THE SUPPORTING DOCUMENTATION VERIFYING DENSITY TEST RESULTS OF 92% OR GREATER.

THE ENTIRE SUBGRADE WILL HAVE BEEN PROOF ROLLED IN THE PRESENCE OF THE SITE INSPECTOR AND GEOTECHNICAL REPRESENTATIVE. PROOF ROLLING SHALL BE A RUBBER TIRE VEHICLE SUCH AS A LOADED TEN (10) TON TRUCK OR APPROVAL COMPACTION EQUIPMENT.

THE FINAL SUBGRADE SHALL BE APPROVED BY THE GEOTECHNICAL ENGINEER AND SITE INSPECTOR BEFORE PLACEMENT OF PAVEMENT SECTION MATERIALS.

DPU UTILITY NOTES

1. PRIOR TO CONSTRUCTION OR EXCAVATION, THE CONTRACTOR SHALL ASSUME THE RESPONSIBILITY OF LOCATING ANY UNDERGROUND UTILITIES (PUBLIC OR PRIVATE) THAT MAY EXIST OR CROSS THROUGH THE AREA OF CONSTRUCTION. BEFORE YOU DIG, CALL "MISS UTILITY" OF VIRGINIA AT 1–800–552–7001. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING, AT THEIR EXPENSE, ANY EXISTING UTILITIES DAMAGED DURING CONSTRUCTION.
2. THE CONTRACTOR SHALL NOTIFY THE APPROPRIATE CITY DEPARTMENT PRIOR TO MAKING ANY UTILITY ADJUSTMENTS OR PERFORMING OTHER WORK WITHIN THE RIGHT–OF–WAY.
3. THE SEQUENCE OF UTILITY CONSTRUCTION SHALL BE DEVELOPED IN SUCH A MANNER THAT WATER AND SANITARY SEWER SERVICE IS MAINTAINED AT ALL TIMES DURING CONSTRUCTION EXCEPT DURING TIE–INS AND CONNECTIONS. WHEN SERVICE IS INTERRUPTED, THE CONTRACTOR SHALL PROVIDE THE CITY WITH 72 HOURS NOTICE PRIOR TO THE INTERRUPTION. THE AFFECTED PROPERTY OWNER WILL BE NOTIFIED 48 HOURS PRIOR TO SERVICE INTERRUPTIONS. CONTRACTOR SHALL PROVIDE THE CITY WITH A DETAILED PLAN AND SCHEDULE FIVE (5) WORKING DAYS IN ADVANCE TO PERFORMING WORK, WHICH REQUIRES INTERRUPTION TO CUSTOMER UTILITY SERVICE. SERVICE INTERRUPTIONS SHALL BE KEPT TO A MINIMUM.
4. UNLESS OTHERWISE NOTED, ALL GAS AND WATER UTILITY MATERIALS AND CONSTRUCTION METHODS SHALL BE IN ACCORDANCE WITH THE STANDARDS SPECIFICATION FOR GAS AND WATER SYSTEMS CONSTRUCTION AND MAINTENANCE DPU NO. 1–92, LATEST EDITION. THE CITY OF RICHMOND'S SEWER SPECIFICATIONS AND THE LATEST EDITIONS OF THE VIRGINIA DEPARTMENT OF HEALTH WATERWORKS REGULATIONS, AND PROPOSED SEWAGE COLLECTION AND TREATMENT REGULATION.
5. LOCATIONS OF EXISTING UTILITIES ACROSS OR ALONG THE LINE OF THE PROPOSED WORK ARE SHOWN ONLY IN AN APPROXIMATE LOCATION ON THE PLANS. CONTRACTOR SHALL LOCATE ALL UNDERGROUND LINES AND STRUCTURES AS NECESSARY. CONTRACTOR SHALL CALL "MISS UTILITY" @ 1–800–522–7001 PRIOR TO CONSTRUCTION AND IS RESPONSIBLE FOR ANY DAMAGE TO UNDERGROUND LINES OR STRUCTURES. GRADING

G–1 The grade line denotes top of finished pavement unless shown otherwise on typical sections or plans.

G–2 Earthwork quantities on this project are based on anticipated settlement and may require adjusting during construction.

G–4 The cost of removal of all existing concrete items located in the area to be graded, including, but not limited to the following, shall be included in the price bid for regular excavation: Sidewalk, walls, medians, light pole bases and curb ramps.

G–5 The excavation of unsuitable material as specified on these plans is based on previously conducted subsurface soil investigation. If, during construction, it is deemed necessary to change the depth more than one foot, or the limits of such excavation, such change is to be made at the direction of the Engineer and measurement and payment shall be made in accordance with Section 303 of the applicable VDOT Road and Bridge Specifications.

G–6 The borrow material for this project shall be a minimum CBR 10 or as approved by the Materials Engineer.

G–7 Material from regular excavation which is suitable for stabilization with hydraulic cement (lime) shall be placed in the top portion of the subgrade.

DRAINAGE

D–1 The horizontal location of all drainage structures shown on these plans is approximate only, with the exception of structures showing specific stations, special design bridges and storm sewer systems.

D–2 The horizontal location and invert elevations shown for proposed culverts and storm sewer outfall pipes are based on existing survey data and required design criteria. If during construction, it is found that the horizontal location or invert elevations shown on the plans differ significantly from the horizontal location or elevations of the stream or swale in which the culvert or storm sewer outfall pipe is to be placed, the Engineer shall confer with, and get approval from, the applicable District Drainage Engineer before installing the culvert or storm sewer outfall pipe.

D–3 The "H" dimensions shown on plans for drop inlets and junction boxes and the "L.F." dimensions shown for manholes are for estimating purposes and are based on the proposed invert elevations shown for the structure and the anticipated top (rim) elevation based on existing or proposed finished grade. The actual "H" or "L.F." dimensions are to be determined by the contractor from field conditions.

D–6 Pipes shall conform to any of the allowable types shown on sheet number (specify sheet number), within the applicable height of cover limitations. For strength, sheet thickness, or class designation; available sizes; height of cover limitations; and other restrictions for a particular pipe type or height of cover, see the VDOT Road and Bridge Standard PC–1. Structural plate pipe may be substituted for corrugated pipe of the same size, provided the substitution complies with the applicable sections of the VDOT Road and Bridge Standards PC–1.

D–12 All existing drainage facilities labeled "To Be Abandoned" shall be left in place, backfilled and plugged in accordance with the VDOT Road and Bridge Standard PP–1. Basis of Payment will be C.Y. of Flowable Backfill.

D–13 Existing drainage facilities being utilized as a part of the drainage system, and designated on the plans "To Be Cleaned Out" shall be cleaned as directed by the Engineer. The cost incidental to this shall be included in the contract price for other items.

D–14 Proposed drop inlets with a height (H) less than the standard minimum shown in the VDOT Road and Bridge Standards shall be considered and paid for as Standard Drop Inlets for the type specified. Pipes with less than standard minimum finished height of cover shall be noted as such in the drainage description for the pipe. Specific pipe bedding and cover requirements are provided in the applicable PB–1 and PC–1 standard drawings of the VDOT Road and Bridge Standards.

D–15 Where the plans specify the installation of standard curb drop inlets adjacent to the City of Richmond Standard Curb and Gutter, the Standard Drop Inlets (as shown in the VDOT Road and Bridge Standards) shall be modified in accordance with details shown on sheet number (specify sheet number). These drop inlets shall be considered and paid for as Standard Drop Inlets for the type specified.

D–16 When CG–6 or CG–7 is specified on a radius (such as at a street intersection), the Engineer may approve a decrease in the cross slope of the gutter to facilitate proper drainage.

D–17 St'd SL–1 Safety slab locations are based on the assumed use of precast structures. If cast–in–place structures are utilized, and the interior chamber dimensions (length and width, or diameter) are less than 4 feet, the safety slabs shall not be installed.

PAVEMENT

P–1 If any settlement occurs in concrete pavement adjacent to bridges prior to acceptance of the project by the Department, the contractor shall restore the pavement to the original grade either by the mud jack method or by replacing the pavement. In the event the pavement cracks or becomes damaged, it shall be replaced, if directed by the Engineer.

P–2 The pavement materials on this project will be paid for on a tonnage basis. The weight will vary in accordance with the specific gravity of the aggregates and the asphaltic content of the mix actually used to secure the design depth. The weight of the asphalt concrete is based on 95% of the theoretical maximum density.

INCIDENTALS

I–3 Service Roads are to be constructed, and private entrances connected thereto prior to the permanent severing of private entrances by other phases of the proposed construction.

I–6 Certain trees shall be preserved as noted on plans or as directed by the Engineer.

I–7 Where Standard slope roundoffs would damage trees, bushes or other desirable vegetation, they shall be omitted when so ordered by the Engineer.

I–8A Clearing and grubbing shall be confined to those areas needed for construction. No trees or shrubs in ungraded areas shall be cut without the permission of the Engineer.

I–9 When no centerline alignment is shown for a proposed entrance, the entrance shall be constructed in the same location as the existing entrance.

I–10 St'd. RM–1 Right of Way monuments shall be set by the Contractor.

I–13 Salvaged guardrail materials not used in the new construction shall become the property of the Department and the Contractor shall deliver and store, at no additional cost to the Department, the unused materials at the Department's maintenance yard at 400 Jefferson Davis Highway during the Department's normal working hours.

I–14 Salvaged guardrail materials not used in the new construction shall become the property of the Contractor and shall be disposed of at a licensed landfill, recycled or be retained by the Contractor.

I–15 Where Guardrail GR–2 or GR–8 is shown on the plans and in the summaries, either new guardrail or reused guardrail shown shall be used as provided elsewhere in these plans. The total quantities have been proportioned between new and reuse guardrail based on an estimate of the amount of existing beam that is reuseable. The Contractor will be paid for the actual quantities of Guardrail, St'd. GR–2 or St'd. GR–8 or Reuse Guardrail, St'd. GR–2 or St'd. GR–8 as determined by the Engineer.

I–16 The "underground utilities" survey data on this project has been provided by consultant and copies are available from the Department.

I–17 For method of constructing Straight–Line Taper Lanes in curb and/or curb and gutter sections, see typical details on Sheet 2B(2).

I–18 All pavement markings and traffic flow arrows shown on the roadway construction plans are schematic only. The actual location and application of pavement markings shall be in accordance with Section 704 of the applicable VDOT Road and Bridge Specifications, MUTCD, sequence of construction/traffic control plans, pavement marking plan sheets 22(1) thru 22(19) and as directed by the Engineer.

I–19 The following outside sources, under contract with VDOT, have provided information on this project.

Hydraulic Design	–	RK&K
Roadway Design	–	RK&K
Utility Design	–	RK&K
Utility Designation	–	Inframap
Utility Location	–	Inframap
Survey	–	Century Engineering (Previously NXL)
Bridge Design	–	N/A
Traffic Design	–	VHB
Landscape Design	–	VHB

If questions or problems arise during construction, please contact the Project Manager. DO NOT CONTACT THE OUTSIDE SOURCES.

I–20 The Official Electronic PDF Version of the plans will override the paper copies or prints of specific layers.

Portions of this plan assembly have been CADD generated. To assist in the preparation of the bid and construction of the project, AutoCAD format (.dwg) files will be made available to the prime contractor during bids and after award of the contract.

I–21 All electronic plan assemblies will include the construction plans in two formats: PDF files and AutoCAD format (.dwg) files. Only the PDF files will be considered as part of the official plan assembly.

The AutoCAD format (.dwg) files are furnished only as information for the contractor. These plans are developed in layers (levels) to aid in readability. (See the VDOT CADD Manual for CADD Level Structure). However, the construction items may or may not be in the proper layering scheme as described in the VDOT CADD Manual. The AutoCAD files will only match the scanned files if all required levels are turned on. A AutoCAD Software license is required to be able to read these files.

STORMWATER MANAGEMENT

S–4 The SWM–1 Drainage Structure (or other control structure) shall have 4" high numbers and 1" wide stripes painted at 1' intervals as shown on the Standard Drawings or detail sheets. The numbers and stripes are to be installed at the time of the initial installation of the SWM–1 Drainage Structure (or other control structure). Paint and application shall be in accordance with Section 231 and 411 of the applicable VDOT Road and Bridge Specifications and the cost is to be included in the price bid for the applicable structure.

SHOCKOE VALLEY STREET IMPROVEMENTS
DETAIL SHEET

AUTHORITY: CITY OF RICHMOND, DPW

DESIGN BY: DBeale DRAWN BY: JAlexander CHECKED BY: ASamberg	REVIEWED BY:	FIELD NOTES	SCALE: NO SCALE	DATE: SEPTEMBER 2022	PROJECT SHEET 2B(2)	DRAWING NO. 0-28633

EROSION CONTROL NARRATIVE:

-SITE DESCRIPTION:
THE PROJECT IS LOCATED IN THE CITY OF RICHMOND. THIS PROJECT CONSISTS OF ROADWAY IMPROVEMENTS IN THE SHOCKOE BOTTOM AREA OF THE CITY ALONG OLIVER HILL WAY, E.BROAD STREET, VENABLE STREET, 16TH STREET AND MOSBY STREET. THE IMPROVEMENTS INCLUDE WIDENING, THE ADDITION OF BIKE LANES AND PARKING SPACES ALONG THE SIDE OF THE ROAD, AND FOUR ROUNDABOUTS TO IMPROVE TRAFFIC FLOW.

-EXISTING SITE CONDITIONS:
THE EXISTING SURFACE RUNOFF IN THE SITE AREA IS CONVEYED BY AN URBAN DRAINAGE SYSTEM TO A COMBINED SEWER SYSTEM.

- ADJACENT AREAS: THE SITE AREA IS LOCATED IN AN URBAN AREA IN SHOCKOE BOTTOM. MUCH OF THE ADJACENT OFFSITE AREAS FLOW INTO THE PROPOSED DRAINAGE SYSTEM. THE ULTIMATE OUTFALL OF THIS DRAINAGE SYSTEM IS THE EXISTING COMBINED SEWER SYSTEM.
NO ADJACENT AREAS DOWNSTREAM OF THE PROJECT ARE ANTICIPATED TO BE AFFECTED BY THE LAND DISTURBANCE.

-OFF-SITE AREAS:
NO OFF-SITE LAND DISTURBING ACTIVITIES ARE PROPOSED.

-SITE SOILS:
THE SITE AREA IS COMPRISED OF:

	ERODIBILITY	
- AFFLING-URBAN LAND COMPLEX, 0 TO 4% SLOPES	HIGH	
- WATERE-WEDOWEE COMPLEX, 20 TO 45% SLOPES	MED ⟶	HIGH
- UDORTHENTS-DARPS COMPLEX, PITS	MED ⟶	HIGH
- URBAN LAND	LOW	

-CRITICAL AREAS:
PRECAUTIONS SHALL BE TAKEN TO MINIMIZE ENCROACHMENT, CONTROL SEDIMENT TRANSPORT AND STABILIZE THE WORK AREA TO THE GREATEST EXTENT POSSIBLE DURING CONSTRUCTION. STABILIZE EXISTING SOILS IN THE WORK AREAS. IF NECESSARY TO PREVENT EROSION, CONTRACTOR SHALL HAVE READY ACCESS TO EC-2 EROSION MATERIAL FOR IMMEDIATE APPLICATION UPON COMPLETION OF DISTURBANCE ACTIVITIES.CONTRACTOR MUST ALSO MAINTAIN / INSPECT REGULARLY PERIMETER SILT FENCING IN ORDER TO PREVENT SILT / SEDIMENT FROM WASHING DOWNSTREAM DURING LAND DISTURBANCE.

-EROSION AND SEDIMENT CONTROL MEASURES:
SEE EROSION CONTROL PLAN SHEETS 2C(3)-2C(10) AND 2D(3)-2D(10) FOR LEGEND FOR SYMBOLS USED AND LOCATION OF PROPOSED E&S MEASURES.

-PERMANENT STABILIZATION:
THE SITE WILL BE PERMANENTLY STABILIZED UTILIZING SEEDING IN ACCORDANCE WITH THE VIRGINIA EROSION AND SEDIMENTATION CONTROL HANDBOOK ONCE STORM DRAIN INSTALLATION IS COMPLETE (SEE SEEDING TABLES ON THIS SHEET). SLOPES THAT ARE FOUND TO BE ERODING EXCESSIVELY WITHIN ONE YEAR OF PERMANENT STABILIZATION SHALL BE PROVIDED WITH ADDITIONAL SLOPE STABILIZING MEASURES UNTIL THE PROBLEM IS CORRECTED PER MS-7.
-STORMWATER RUN-OFF CONTROL:
THE OVERALL DRAINAGE PATTERN OF THE SITE WILL REMAIN MOSTLY UNCHANGED FROM PRE- TO POST-CONDITIONS. DISTURB APPROXIMATELY 6.84 ACRES AND IS PARTIALLY LOCATED WITHIN A CBPA AREA.
NO WATER QUALITY MEASURES ARE REQUIRED (SEE CBPA SHEET 2A(1)-2A(3)).

-CALCULATIONS:
CLOSED SYSTEM PROFILES AND CALCULATIONS CAN BE FOUND ON SHEET 2F(1)-2F(7) AND 2G(1)-2G(4).
-MAINTENANCE
IN GENERAL, ALL EROSION AND SEDIMENT CONTROL MEASURES WILL BE CHECKED DAILY AND AFTER EACH SIGNIFICANT RAINFALL. THE FOLLOWING ITEMS WILL BE CHECKED IN PARTICULAR:
1. INLET PROTECTION & GRAVEL OUTLETS WILL BE CHECKED REGULARLY FOR SEDIMENT BUILDUP WHICH WILL PREVENT DRAINAGE. IF INLET PROTECTION FABRIC IS CLOGGED BY SEDIMENT, IT SHALL BE REMOVED AND CLEANED OR REPLACED. IF GRAVEL OUTLET IS CLOGGED BY SEDIMENT, IT SHALL BE REMOVED AND CLEANED OR REPLACED.
2. THE SILT FENCE BARRIER WILL BE CHECKED REGULARLY FOR UNDERMINING OR DETERIORATION OF THE FABRIC. SEDIMENT SHALL BE REMOVED WHEN THE LEVEL OF SEDIMENT DEPOSITION REACHES HALF WAY TO THE TOP OF THE BARRIER
3. THE SEEDED AREAS WILL BE CHECKED REGULARLY TO ENSURE THAT A GOOD STAND IS MAINTAINED. AREAS SHOULD BE FERTILIZED AND RESEEDED AS NEEDED.

EROSION CONTROL SEQUENCE

1. ONCE RELEASED BY THE CITY OF RICHMOND FOR LAND DISTURBANCE PERMITS ISSUED TO PROJECT, CONTRACTOR SHALL INSTALL PERIMETER SILT FENCING ALONG DOWNSTREAM SIDE OF STORM DRAIN TRENCH AREA.
2. PROJECT PERMITS MUST BE STRICTLY COORDINATED WITH CITY OF RICHMOND DEPARTMENT OF PUBLIC UTILITIES.
3. DRAINAGE INLET PROTECTION AT EXISTING INLETS TO BE INSTALLED PER MS-10.
4. COMMENCE STORM DRAIN INSTALLATION WITH APPROPRIATE INLET PROTECTION.
5. THE STAGING AREAS SHALL BE WITHIN THE RIGHT-OF-WAY WITH NO SOIL STOCKPILING PROPOSED.
6. IF DUST BECOMES A PROBLEM DURING CONSTRUCTION, A WATER TRUCK WILL BE REQUIRED ON-SITE AT ALL TIMES. DUST MUST BE CONTROLLED IN ACCORDANCE WITH STD. & SPEC. DUST CONTROL, IN THE LATEST VERSION OF THE VA EROSION AND SEDIMENT CONTROL HANDBOOK.
7. PERMANENT OR TEMPORARY SOIL STABILIZATION SHALL BE APPLIED TO DENUDED AREAS WITHIN 7 DAYS AFTER FINAL GRADE IS REACHED ON ANY PORTION OF THE SITE. TEMPORARY SOIL STABILIZATION SHALL BE APPLIED WITHIN 7 DAYS TO DENUDED AREAS THAT MAY NOT BE AT FINAL GRADE BUT WILL REMAIN DORMANT (UNDISTURBED) FOR LONGER THAN 14 DAYS. PERMANENT STABILIZATION SHALL BE APPLIED TO AREAS THAT ARE TO BE LEFT DORMANT FOR MORE THAN ONE YEAR.
8. ON-SITE STORM SYSTEM TO BE CLEANED.
9. ALL EROSION CONTROL MEASURES MUST BE INSTALLED AND MAINTAINED PER THE LATEST EDITION OF THE VIRGINIA EROSION AND SEDIMENT CONTROL MANUAL.
10. EROSION & SEDIMENT CONTROL MEASURES MAY BE REMOVED ONLY UPON THE APPROVAL OF THE CITY'S E&S INSPECTOR.

MINIMUM STANDARDS (9VAC25-840-40)

MS-1: PERMANENT OR TEMPORARY SOIL STABILIZATION SHALL BE APPLIED TO DENUDED AREAS WITHIN SEVEN DAYS AFTER FINAL GRADE IS REACHED ON ANY PORTION OF THE SITE. TEMPORARY SOIL STABILIZATION SHALL BE APPLIED WITHIN SEVEN DAYS TO DENUDED AREAS THAT MAY NOT BE AT FINAL GRADE BUT WILL REMAIN DORMANT FOR LONGER THAN 14 DAYS. PERMANENT STABILIZATION SHALL BE APPLIED TO AREAS THAT ARE TO BE LEFT DORMANT FOR MORE THAN ONE YEAR.

MS-2: DURING CONSTRUCTION OF THE PROJECT, SOIL STOCK PILES AND BORROW AREAS SHALL BE STABILIZED OR PROTECTED WITH SEDIMENT TRAPPING MEASURES. SEEDING NOTES

All stabilization/seeding will be accomplished in accordance with the Virginia Erosion and Sedimentation Control Handbook.

Any disturbed area not paved, sodded, or built upon, will have a vegetative cover prior to final inspection, and in the opion of the Environmental Engineer, will be mature enough to control soil erosion satisfactorily and survive severe weather conditions.

Stream diversion areas, waterways, banks and related areas will be seeded and mulched immediately after work in watercourse is completed. In no case shall wetland areas be reseeded with any species of fescue.

Winterization - any disturbed area not paved, sodded or built upon by October 15 is to be seeded and mulched on that date unless waived by the Environmental Engineer.

Temporary seeding will be applied within 7 days to denuded areas which may not be at final grade but will remain dormant (undisturbed) for longer than 30 days. For temporary seeding use 50% of the recommended rates of fertilizer, lime and full amount of seed and mulch required for regular seeding.

Electric power, telephone, and gas supply trenches are to be compacted, seed and mulched within 7 days after backfill.

All temporary earth berms, diversions, and silt dams are to be mulched and seeded for vegetative cover immediately after grading. Straw or hay mulch is required. The same applies to all stockpiles, on site as well as soil (intentionally) transported from the project site.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: City of Richmond, Virginia
Survey Area Data: Version 14, Aug 29, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 25, 2010—Oct 1, 2013

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

WATER QUALITY IMPACT ASSESSMENT

WQIA CHECKLIST:

1. THERE ARE NO DESIGNATED WETLAND AREAS OR IMPACTS WITHIN THE PROJECT LIMITS.

2. THERE WILL BE NO DISRUPTION IN SUPPLY OF WATER TO WETLANDS.

3. THIS PROJECT WILL NOT DISRUPT THE EXISTING HYDROLOGY.

4. THERE WILL BE NO DREDGING MATERIAL ASSOCIATED WITH THIS PROJECT.

5. THERE WILL BE NO IMPACTS ON SHELLFISH BEDS, SUBMERGED AQUATIC VEGETATION, OR FISH SPAWNING AREAS.

6. ROADWAY PROFILES WERE DESIGNED TO MINIMIZE OFFSITE CUT/FILL IMPACTS. WHERE PROFILE ADJUSTMENTS WERE UNABLE TO PREVENT LARGE CUT/FILL SLOPES, RETAINING WALLS WILL BE USED WHEN REASONABLE.

SEE PLANS FOR DEPICTION OF DESIGN AND E&S MEASURES USED TO MINIMIZE HYDROLOGICAL IMPACTS.

WQIA: HYDROLOGICAL ELEMENT

TOPOGRAPHY:
THE EXISTING TOPOGRAPHY ON SITE CONSISTS OF DEVELOPED URBAN STREETS. THE STREETS AND ADJACENT PROPERTIES RANGE FROM ROLLING TERRAIN WITH SOME FLAT AREAS TO STEEP SLOPES. THE EXISTING URBAN DRAINAGE SYSTEM PRIMARILY DRAINS TO AN EXISTING COMBINED SEWER SYSTEM.

HYDROLOGY:
SURFACE RUNOFF IN THE AREA IS CONVEYED BY A SYSTEM OF STORM DRAINS AND COMBINED SEWER SYSTEMS,

SOILS AND GEOLOGY:
THE SITE AREA IS COMPRISED OF:

- APPLING-WEDOWEE-URBAN LAND COMPLEX, 0 TO 4% SLOPES
- WATEREE-WEDOWEE COMPLEX, 20 TO 45% SLOPES
- UDORTHENTS-DUMPS COMPLEX, PITS
- URBAN LAND

PROPOSED DEVELOPMENT IMPACTS:
THE PROJECT IS LOCATED IN THE CITY OF RICHMOND. THIS PROJECT CONSISTS OF ROADWAY IMPROVEMENTS IN THE SHOCKOE BOTTOM AREA OF THE CITY ALONG OLIVER HILL WAY, E. BROAD STREET, VENABLE STREET, 18TH STREET AND MOSBY STREET. THE IMPROVEMENTS INCLUDE WIDENING, THE ADDITION OF BIKE LANES AND PARKING SPACES ALONG THE SIDE OF THE ROAD, AND FOUR ROUNDABOUTS TO IMPROVE TRAFFIC FLOW. THE PROPOSED DRAINAGE SYSTEM OUTFALLS TO THE EXISTING COMBINED SEWER SYSTEM. FLOWS INTO THE EXISTING SYSTEM WERE ANALYZED TO ASSURE THAT PROPOSED FLOWS REMAIN EQUAL OR LESS THAN EXISTING FLOWS.

CHESAPEAKE BAY DRAINAGE NARRATIVE

BACKGROUND:
THE PROJECT IS LOCATED IN THE CITY OF RICHMOND. THIS PROJECT CONSISTS OF ROADWAY IMPROVEMENTS IN THE SHOCKOE BOTTOM AREA OF THE CITY ALONG OLIVER HILL WAY, E. BROAD STREET, VENABLE STREET, 18TH STREET AND MOSBY STREET. THE IMPROVEMENTS INCLUDE WIDENING, THE ADDITION OF BIKE LANES AND PARKING SPACES ALONG THE SIDE OF THE ROAD, AND FOUR ROUNDABOUTS TO IMPROVE TRAFFIC FLOW.

WATER QUALITY:
THE MAJORITY OF THE PROJECT DRAINS TO AN EXISTING COMBINED SEWER SYSTEM AND FLOWS TO A WASTEWATER TREATMENT PLANT. THIS PART OF THE PROJECT IS EXCLUDED FROM WATER QUALITY REQUIREMENTS. A SMALLER PORTION OF THE PROJECT IS LOCATED WITHIN THE CBPA RMA AND IS SUBJECT TO WATER QUALITY REQUIREMENTS. NUTRIENT CREDIT REQUIREMENTS FOR THIS PORTION OF THE PROJECT ARE PROVIDED BY ONSITE BMP TREATMENT.

A LEVEL 1 BIORETENTION FACILITY IS PROPOSED AT THE INTERSECTION OF OLIVER HILL WAY AND BALDING STREET. THIS FACILITY IS DESIGNED TO TREAT 0.75 AC AND PROVIDE 0.65 LB/YR OF PHOSPHORUS TREATMENT FOR THE PROJECT. THE FULL DA TO THIS FACILITY IS 1.21 AC (0.75 AC LIES WITHIN THE ROW) AND THE FACILITY IS DESIGNED TO HANDLE THE 10 YEAR STORM EVENT FROM THE FULL DRAINAGE AREA.

WATER QUANTITY:
THE EXISTING SURFACE RUNOFF IN THE AREA IS CONVEYED BY AN URBAN DRAINAGE SYSTEM TO A COMBINED SEWER SYSTEM.

THE PROPOSED SURFACE RUNOFF IN THE AREA IS CONVEYED BY A PROPOSED STORM SEWER SYSTEM WHICH DRAINS TO THE EXISTING COMBINED SEWER SYSTEM. QUANTITY CHECKS WERE DONE ALONG THE SYSTEM TO MAKE SURE THAT APPROPRIATE DETENTION WAS PROVIDED TO ENSURE THAT PROPOSED FLOW TO THE CSS DID NOT INCREASE FROM EXISTING CONDITIONS.

NOTE:
The achieved phosphorus removal for the bioretention accounts for impervious and turf ground cover draining to the BMP that are within public R/W. This approach allows for maximum treatment by the BMP. As a result of treating areas beyond the LOD, the VRRM spreadsheet has a note stating "Check Site Tap land cover areas" and another stating "AREA EXCEEDED". The default DEQ VRRM spreadsheet does not allow for the computation of the TP LOAD REDUCTION ACHIEVED or REMAINING if the land cover in the DA tabs to the BMP's exceeds the Site Area of the Site Area tab. Due to the pond treating R/W area outside of the SWM site area being the cause of these messages, these warning messages may be ignored.

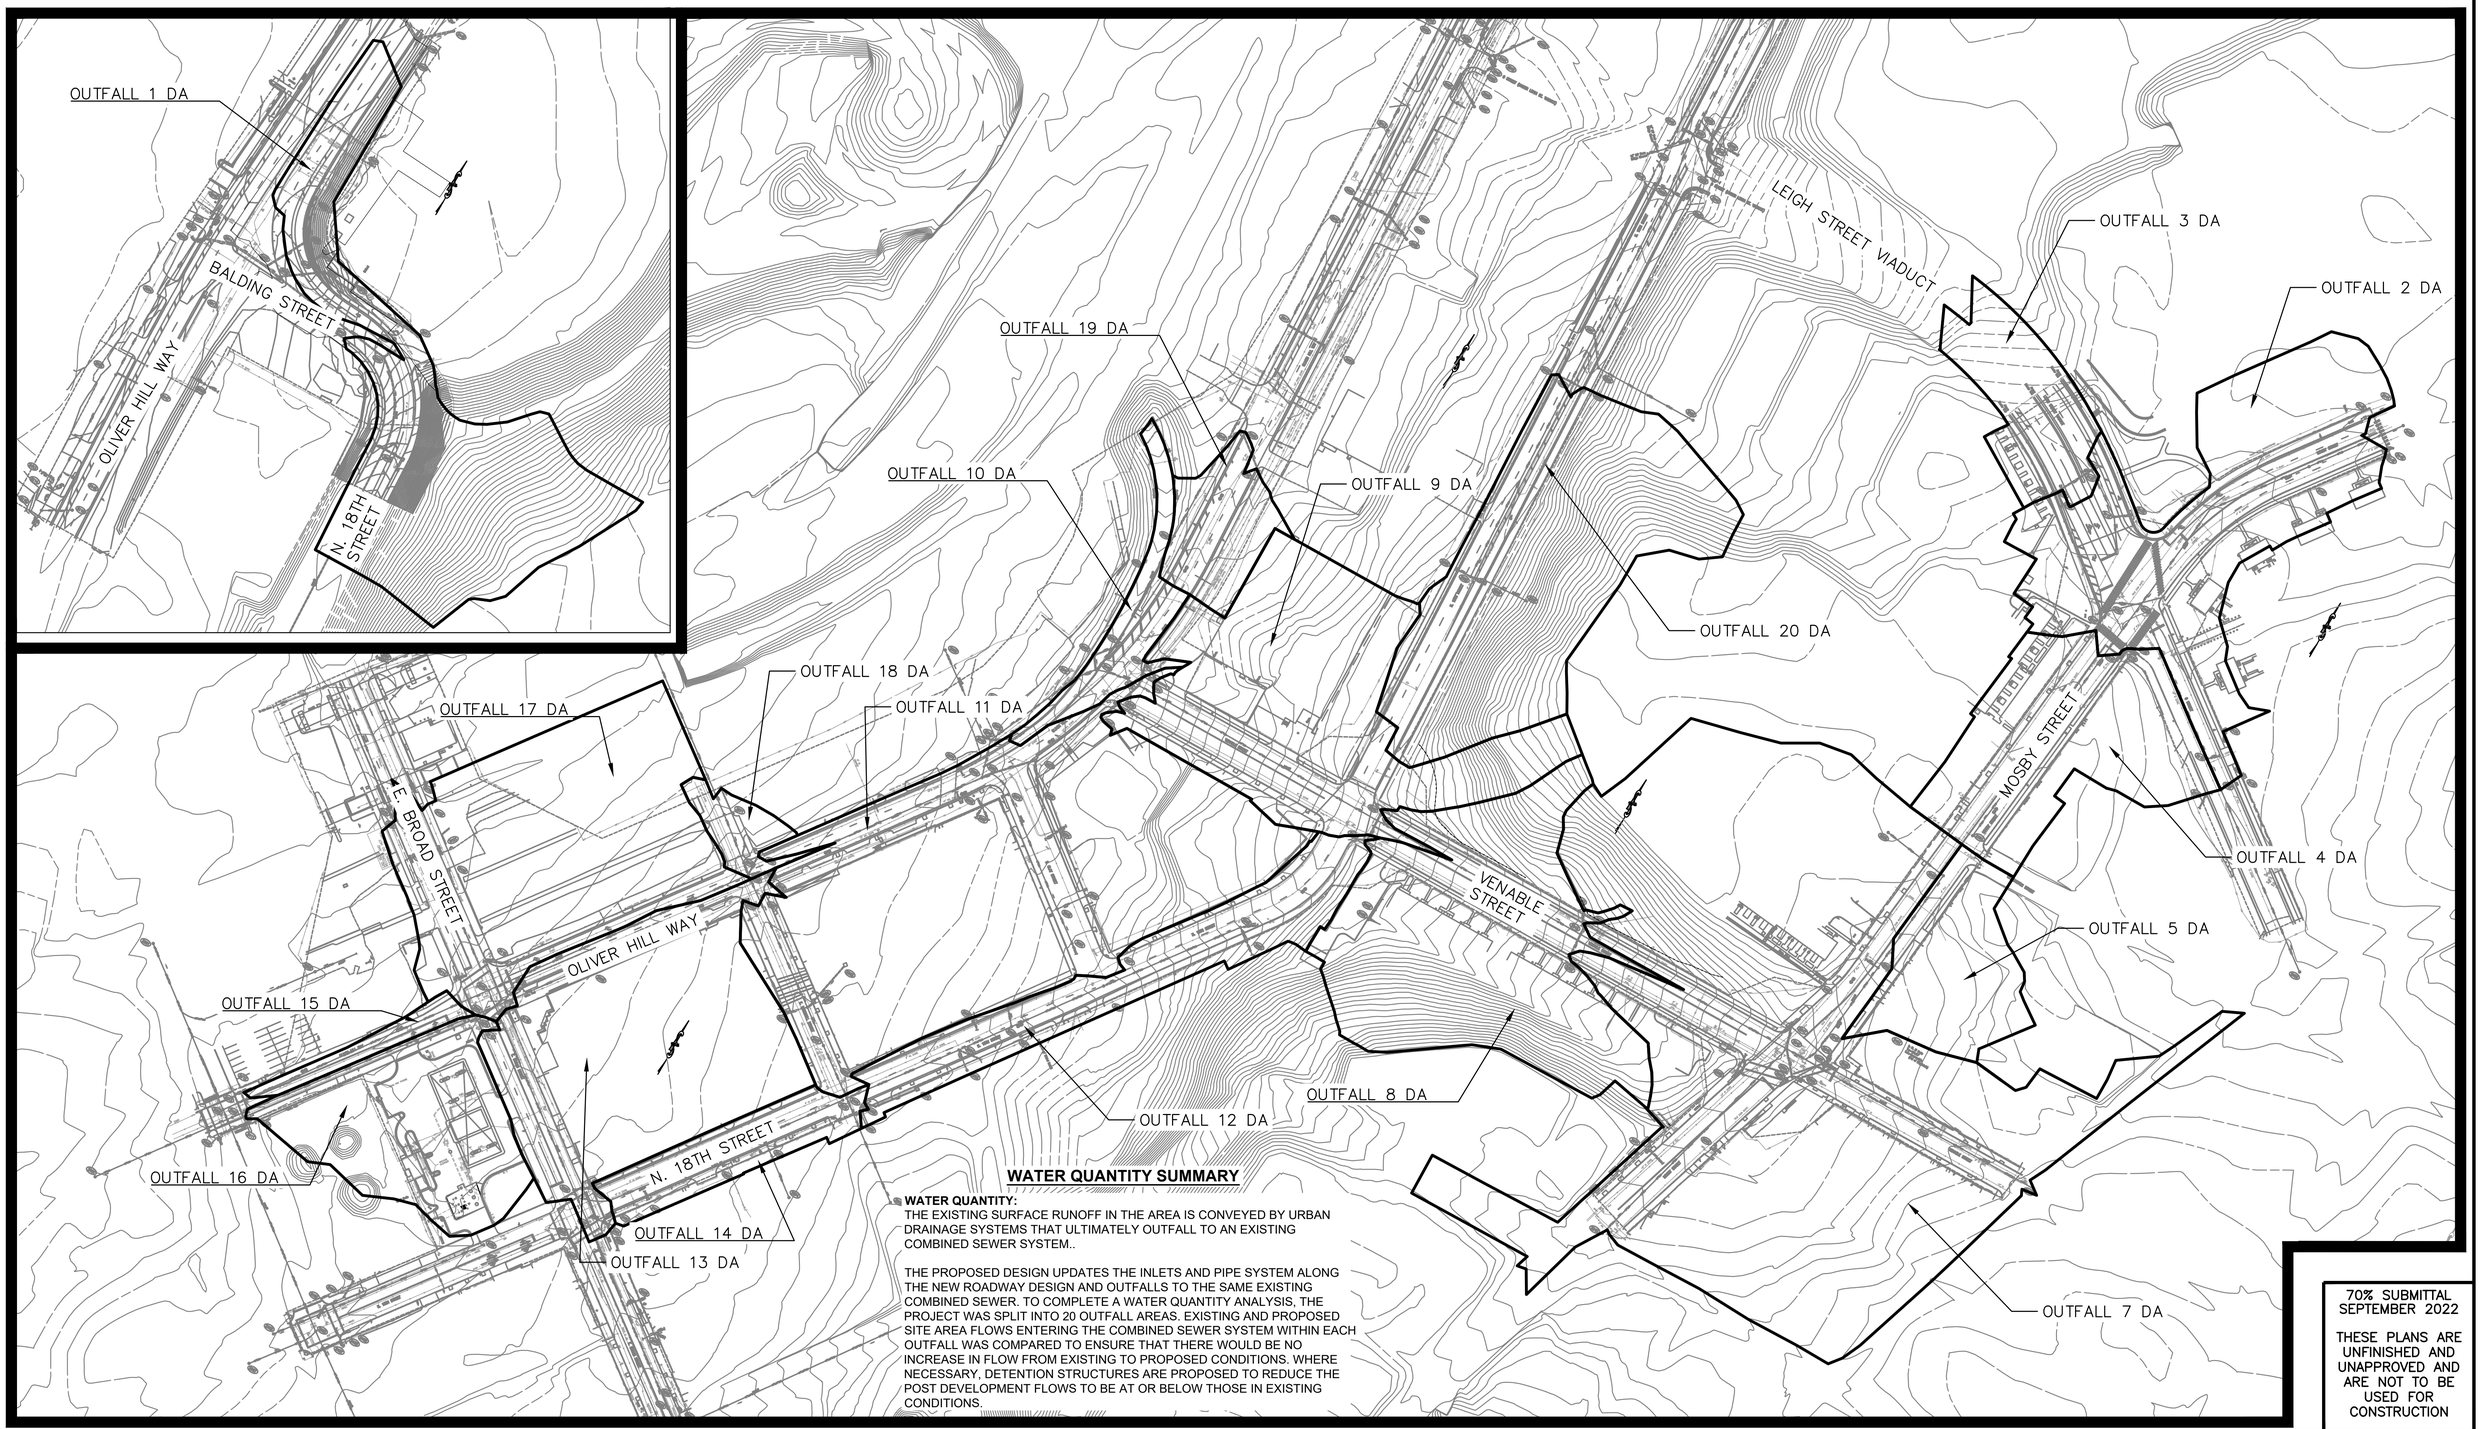
WATER QUANTITY EXISTING OUTFALL MAP



WATER QUANTITY SUMMARY

WATER QUANTITY:
THE EXISTING SURFACE RUNOFF IN THE AREA IS CONVEYED BY URBAN DRAINAGE SYSTEMS THAT ULTIMATELY OUTFALL TO AN EXISTING COMBINED SEWER SYSTEM..

THE PROPOSED DESIGN UPDATES THE INLETS AND PIPE SYSTEM ALONG THE NEW ROADWAY DESIGN AND OUTFALLS TO THE SAME EXISTING COMBINED SEWER. TO COMPLETE A WATER QUANTITY ANALYSIS, THE PROJECT WAS SPLIT INTO 20 OUTFALL AREAS. EXISTING AND PROPOSED SITE AREA FLOWS ENTERING THE COMBINED SEWER SYSTEM WITHIN EACH OUTFALL WAS COMPARED TO ENSURE THAT THERE WOULD BE NO INCREASE IN FLOW FROM EXISTING TO PROPOSED CONDITIONS. WHERE NECESSARY, DETENTION STRUCTURES ARE PROPOSED TO REDUCE THE POST DEVELOPMENT FLOWS TO BE AT OR BELOW THOSE IN EXISTING CONDITIONS.

GENERAL NOTES FOR RETAINING WALLS:

Specifications:

Construction: Virginia Department of Transportation Road and Bridge Specifications, 2016.

Design: AASHTO LRFD Bridge Design Specifications, 8th Edition, 2017; and VDOT Modifications, and City of Charlottesville Standards and Design Manual.

Standards: Virginia Department of Transportation Road and Bridge Standards, 2016; including all current revisions.

These plans are incomplete unless accompanied by the Supplemental Specifications and Special Provisions included in the contract documents.

Class I CRR steel shall be used in all wall panels and coping.

SEGMENTAL PRECAST FACING MECHANICALLY STABILIZED EARTH (MSE) WALLS:

The minimum design life of MSE wall shall be 75 years.

For bearing resistance requirements, see the MSE Wall Bearing Resistance Data Table.

For settlement requirements, see the Estimated Wall Settlement Table.

Prior to wall construction, the foundation shall be compacted with a smooth wheel vibratory roller weighing 10 tons minimum. The drums of the roller should be ballasted, and each pass of the roller should overlap one half the width of the previous pass. The roller shall make at least ten passes over the proposed wall foundation zone. No density test will be required. Any foundation soils found to be unsuitable and/or unstable shall be removed and replaced with select material Type I minimum CBR of 30. Compact the foundation area according to the VDOT Specifications.

Architectural treatment shall be _____.

Concrete surface coating shall be _____, similar to Federal Standard Color No. _____.

An impervious membrane shall be placed below the pavement and just above the first row of reinforcement. The membrane shall be sloped to drain away from the facing to an intercepting longitudinal drain outlet beyond the reinforced zone.

A non-woven geotextile shall be used as a separator between the mechanically stabilized earth mass and the subbase.

The selected wall supplier will submit a detailed design and shop drawings for approval.

Provide drainage details such as perforated pipe underdrain and/or drainage blanket based upon field conditions.

All block types and other related elements shall be detailed on shop drawings.

MSE WALL BEARING RESISTANCE DATA TABLE

Wall Location	Load and Resistance Factor Design (LRFD)	
	Service Applied Base Pressure (ksf)	Strength Factored Bearing Resistance ϕ_b = 0.65 (ksf)

The wall design shall be based on the lower of the values (either Service Limit or Strength Limit States) given for each wall in the table above. The Nominal Bearing Resistance will be verified by the engineer prior to construction of wall.

ESTIMATED WALL SETTLEMENT TABLE FOR STRUCTURE UNIT

Wall Location	Monitoring Location	Estimated intermediate settlement at the end of wall construction (inches)	Estimated total settlement over the life of the wall (inches)	Estimated time for percent settlement to occur (days)				Required Waiting Period (from wall completion) (days)
				25%	50%	75%	95%	

Total settlement is the settlement that occurs due to the placement of the wall between the beginning of wall construction and the end of design wall life. Total settlement also includes secondary consolidation till the end of design wall life.

Intermediate settlement is the settlement that occurs between the beginning of wall construction and the completion of the wall.

The "waiting" period starts when the survey readings at the completion of the wall construction are obtained and shall continue until the required waiting period has been completed and the Geotechnical Engineer of Record reviews the data and confirms that the rate of settlement has stabilized, primary consolidation or elastic settlement is complete and that the remaining long-term settlement will not exceed the allowable amount.

Survey readings shall be taken weekly during wall construction and until the waiting period is complete.

The elevations for all pins shall be taken when all project construction is completed and results placed in the as built plans.

Typical Traffic Control
Short Duration Operation on a Multi-Lane Roadway
(Figure TTC-15.2)
NOTES

Standard:

1. **This typical traffic control layout shall be used only during non-peak travel periods with the approval of the District[2] Traffic Engineer. This typical traffic control layout shall not be used for Limited Access highways or two-lane roadways.**
2. **Each vehicle involved in the operation shall have an arrow board, and at least one high-intensity amber rotating, flashing or[1] oscillating light. Vehicle hazard warning signals shall not be used instead of rotating, flashing, or oscillating[1] lights, but as a supplement.**
3. **Vehicle-mounted signs shall be mounted with the bottom of the sign at a minimum height of 48 inches above the pavement.**

Guidance:

4. *The minimum distance between the sign/shadow vehicle and the truck-mounted attenuator (TMA) vehicle should be 500'-800' where the posted speed limit is greater than 45 mph, and 350'-500' where the posted speed limit is 45 mph or less.*

Option:

5. The static warning sign and arrow board may be replaced with a vehicle-mounted CMS with a minimum character height of 10".
6. *When closing a lane, a PCMS may be used in advance of the first warning signs.*[2]

Standard:

7. **If Shadow Vehicle 1 occupies any part of the travel lane, it shall be equipped with a TMA. A truck-mounted attenuator (TMA) shall be used on Shadow Vehicle 2 in the travelway regardless of the posted speed limit.**

Guidance:

8. *When using a vehicle-mounted CMS to replace the arrow board, each word message phase should be followed by the Type B arrow display.*

Support:

9. *A short duration operation is defined as an operation that requires 16 minutes to 60 minutes to perform in the immediate area. (The immediate area is defined as a 1000' ± linear distance.)*

Option:

10. *The work area may be delineated by installing channelizing devices. The channelizing devices would start at the front of the shadow vehicle and extend through the work area. The spacing between channelizing devices may be reduced in the travelway to prevent motorists from entering the work area.*[1]

NOTES

Standard:

1. **On divided highways having a median wider than 8', right and left sign assemblies shall be required.**

Guidance:

2. *Sign spacing should be 1300'-1500' for Limited Access highways. For all other roadways, the sign spacing should be 500'-800' where the posted speed limit is greater than 45 mph, and 350'-500' where the posted speed limit is 45 mph or less.*
3. *When closing a lane, a PCMS should be used in advance of the first warning sign if all of the left side signs cannot be installed.*[2]
4. *Care should be exercised when establishing the limits of the work zone to insure maximum possible sight distance in advance of the transition, based on the posted speed limit and at least equal to or greater than the values in Table 6H-3. For Limited Access highways a minimum of 1000' is desired.*
5. *All vehicles, equipment, workers, and their activities should be restricted to one side of the pavement.*

Standard:

6. **Taper length (L) and channelizing device spacing shall be at the following:**

Taper Length L

*Construction access spacing may be increased to this distance, but shall not exceed one access per ¼ mile.

8. **An arrow board shall be used when a lane is closed. When more than one lane is closed, a separate arrow board shall be used for each closed lane (see Figure TTC-18).**
9. **The buffer space length shall be shown in Table 6H-3 on Page 6H-5 for the posted speed limit.**
10. **A shadow vehicle with either a Type B or C arrow board operating in the caution mode, or at least one high intensity amber rotating, flashing, or[1] oscillating light shall be parked 80'-120' in advance of the first work crew. When the posted speed limit is 45 mph or greater, a truck-mounted attenuator shall be used.**
11. **Vehicle hazard warning signals shall not be used instead of the vehicle's high-intensity amber rotating, flashing, or[1] oscillating lights but can be used to supplement the amber rotating, flashing, or[1] oscillating lights.**

Typical Traffic Control
Inside Lane Closure Operation on a Four-Lane Roadway
(Figure TTC-17.2)
NOTES

Standard:

1. **On divided highways having a median wider than 8', right and left sign assemblies shall be required.**

Guidance:

2. *Sign spacing should be 1300'-1500' for Limited Access highways. For all other roadways, the sign spacing should be 500'-800' where the posted speed limit is greater than 45 mph, and 350'-500' where the posted speed limit is 45 mph or less.*
3. *When closing a lane, a PCMS should be used in advance of the first warning sign if all of the left side signs cannot be installed.*[2]
4. *Care should be exercised when establishing the limits of the work zone to insure maximum possible sight distance in advance of the transition, based on the posted speed limit and at least equal to or greater than the values in Table 6H-3. For Limited Access highways a minimum of 1000' is desired.*
5. *All vehicles, equipment, workers, and their activities should be restricted to one side of the pavement.*

Standard:

6. **Taper length (L) and channelizing device spacing shall be at the following:**

Taper Length L

Speed Limit (mph)	Lane Width (Feet) 9	10	11	12	Remarks	Speed Limit (mph)	Lane Width (Feet) 9	10	11	12	Remarks
25	95	105	115	125	L=S²W/60	50	450	500	550	600	L=SW
30	135	150	165	180	L=S²W/60	55	495	550	605	660	L= SW
35	185	205	225	245	L=S²W/60	60	540	600	660	720	L=SW
40	240	270	295	320	L=S²W/60	65	585	650	715	780	L=SW
45	405	450	495	540	L=SW	70	630	700	770	840	L=SW

Limited Access highways shall use a 1000' merging taper regardless of the posted speed.

Shifting Tapers see Table 6H-2.[2] **Shoulder Taper = ⅓ L Minimum**

7. **Channelizing device spacing shall be at the following:**

Location Spacing	Speed Limit (mph) 0 -35	36 +	Location Spacing	Speed Limit (mph) 0 -35	36 +	Location Spacing	Speed Limit (mph) 0 -35	36 +
Transition	20'	40'	Travelway	40'	80'	*Construction Access	80'	120'

*Construction access spacing may be increased to this distance, but shall not exceed one access per ¼ mile.

8. **An arrow board shall be used when a lane is closed. When more than one lane is closed, a separate arrow board shall be used for each closed lane (see Figure TTC-18).**
9. **The buffer space length shall be shown in Table 6H-3 on Page 6H-5 for the posted speed limit.**
10. **A shadow vehicle with either a Type B or C arrow board operating in the caution mode, or at least one high intensity amber rotating, flashing, or[1] oscillating light shall be parked 80'-120' in advance of the first work crew. When the posted speed limit is 45 mph or greater, a truck-mounted attenuator shall be used.**
11. **Vehicle hazard warning signals shall not be used instead of the vehicle's high-intensity amber rotating, flashing, or[1] oscillating lights but can be used to supplement the amber rotating, flashing, or[1] oscillating lights.**
12. **When a side road intersects the highway within the TTC zone, additional TTC devices shall be placed as needed.**

Option:[2]

13. PTRS and their supporting signs may be used, see sections 6F.99 and 6G.25. Long-term transverse rumble strips may be used in long-term situations, see Section 6F.99 and TTC-20.[2]
14. The supplemental PTRS may be eliminated.

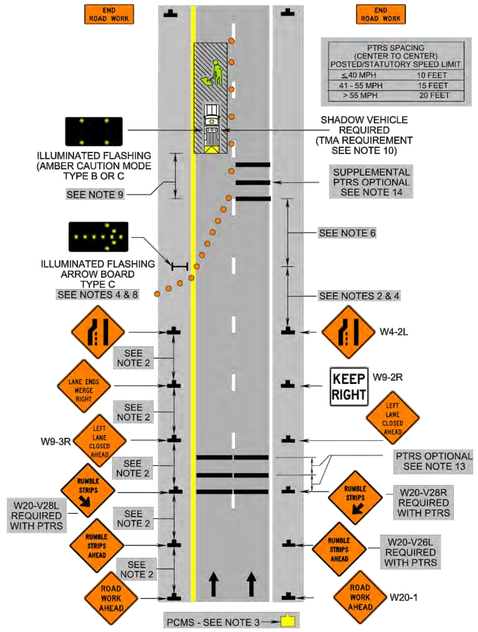
Inside Lane Closure Operation on a Four-Lane Roadway
(Figure TTC-17.2)



Typical Traffic Control
Lane Closure on a Two-Lane Roadway Using Flaggers
(Figure TTC-23.2)
NOTES

Guidance:

1. *Sign spacing distance should be 350'-500' where the posted speed limit is 45 mph or less, and 500'-800' where the posted speed limit is greater than 45 mph.*
2. *Care should be exercised when establishing the limits of the work zone to insure maximum possible sight distance in advance of the flagger station and transition, based on the posted speed limit and at least equal to or greater than the values in Table 6H-3. Generally speaking, motorists should have a clear line of sight from the graphic flagger symbol sign to the flagger.*
3. *To maintain efficient traffic flow in a flagging operation on a two-lane roadway, the maximum time motorists should be stopped at a flagger station is 8 minutes for high volume roadways (average daily traffic of 500 or more vehicles per day) to a maximum of 12 minutes for low volume roadways (less than 500 vehicles per day). For additional information see Section 6E.07.*[1]

Standard:

4. **Portable Temporary Rumle Strips (PTRS) shall be used as noted in Section 6F.99.**[2]
5. **Flagging stations shall be located far enough in advance of the work space to permit approaching traffic to reduce speed and/or stop before passing the work space and allow sufficient distance for departing traffic in the left lane to return to the right lane before reaching opposing traffic (see Table 6H-3 on Page 6H-5).**
6. **All flaggers shall be state certified and have their certification card in their possession when performing flagging duties (see Section 6E.01, Qualifications for Flaggers).**
7. **Cone spacing shall be based on the posted speed and the values in Table 6H-4 on Page 6H-6.**[1]
8. **A shadow vehicle with at least one high intensity amber rotating, flashing, or[1] oscillating light shall be parked 80'-120' in advance of the first work crew.**

Option:

8. A SLOW (W21-V10) sign[2] may be required in this area to give advance warning of the operation ahead by slowing approaching traffic prior to reaching the flagger station or queued traffic.

Guidance:

9. *If the queue of traffic reaches the BE PREPARED TO STOP (W3-4) sign then the signs, and if used the PTRS[1] should be readjusted at greater distances.*
10. *When a highway-rail crossing exists within or upstream of the transition area and it is anticipated that queues resulting from the lane closure might extend through the highway-rail grade crossing, the temporary traffic control zone should be extended so that the transition area precedes the highway-rail crossing (see Figure TTC-56 for additional information on highway-rail crossings).*

Standard:

11. **At night, flagger stations shall be illuminated, except in emergencies (see Section 6E.08).**

Option:

12. Cones may be eliminated when using a pilot vehicle operation or when the total roadway width is 20 feet or less.
13. For low-volume situations with short work zones on straight roadways where the flagger is visible to road users approaching from both directions, a single flagger, positioned to be visible to road users approaching from both directions, may be used (see Chapter 6E).

Standard:[1]

14. **When used[2], three portable temporary rumble (PTRS) strips shall be installed across the entire travel lane adjacent to the BE PREPARED TO STOP (W3-4) sign. The portable temporary rumble strips shall be monitored and adjusted as necessary during the work shift to ensure proper placement on the roadway. When the PTRS are installed, the RUMBLE STRIPS AHEAD (W20-V26) sign shall also be utilized.**

DESIGN BY: BMcAdams DRAWN BY: DPickens CHECKED BY: VHB	REVIEWED BY:	FIELD NOTES	SCALE	DATE SEPTEMBER 2022	PROJECT SHEET 2P(3)	DRAWING NO. 0-28633

Typical Traffic Control
Inside Lane Closure Operation on a Multi-Lane Roundabout
(Figure TTC-32.2)
NOTES

Support:

1. Each roundabout is unique and the traffic control must be developed to meet the specific conditions of the location and the work operation. A detour could possibly better serve traffic movement and must be consider as an alternative to the flagger operation. This traffic control layout can be used on a traffic circle.

Standard:

2. **On divided highways having a median wider than 8', right and left sign assemblies shall be required.**
3. **A shadow vehicle with either a Type B or C arrow board operating in the caution mode, or at least one amber[1] high intensity rotating, oscillating, or flashing[1] light shall be parked 80'-120' in advance of the first work crew. When the posted speed limit is 45 mph or greater, a truck- mounted attenuator shall be used.**
4. **Taper length (L) shall be at the following:**

Taper Length L											
Speed Limit (mph)	Lane Width (Feet)				Remarks	Speed Limit (mph)	Lane Width (Feet)				Remarks
	9	10	11	12			9	10	11	12

45	405	450	495	540	L=SW	70	630	700	770	840	L=SW
Shoulder Taper = ½ L Minimum											

5. **Channelizing device spacing shall be at the following:**

Channelizing Device Spacing								
Location Spacing	Speed Limit (mph)		Location Spacing	Speed Limit (mph)		Location Spacing	Speed Limit (mph)	
	0 -35	36 +		0 -35	36 +		0 -35	36 +
Transition	20'	40'	Travelway	40'	80'	*Construction Access	80'	120'
*Construction access spacing may be increased to this distance, but shall not exceed one access per ¼ mile.								

6. **Vehicle hazard warning signals shall not be used instead of the vehicle's high-intensity amber rotating, flashing, or[1] oscillating lights. Vehicle hazard warning signals can be used to supplement high-intensity amber rotating, flashing, or[1] oscillating lights.**
7. **On long-term projects where the central island of a roundabout allows for the installation of signs, the Roundabout Directional Arrow (R6-4) shall be used and mounted at least 4 feet, measured vertically from the bottom of the sign to the elevation of the near edge of the traveled way otherwise the R6-4 sign can be installed in the approached islands, see the MUTCD Sections 2B-40 and 2B-48.[2]**

Guidance:

8. *Sign spacing distance should be 350'- 500' where the posted speed limit is 45 mph or less, and 500'-800' where the posted speed limit is greater than 45 mph.*
9. *When designing the traffic control and installing the channelizing devices for work activities at roundabouts, accommodations for the turning radius of tractor trailer vehicles and other large vehicles should be considered and the work zone designed accordingly.*

Option:

10. Periodic adjustments to the channelizing devices may be allowed in an active work zone to accommodate the turning movements of tractor trailer vehicles and other large vehicles.
11. The ONEWAY (R6-1R) sign may be installed underneath the R6-4 sign as a supplement.[2]
12. PTRS may be use to enhance the work zone, see Section 6F.99 and TTC-16. Long-term transverse rumble strips may be used to enhance the work zone, see TTC-20 (note 13 and figure).[2]

Street Closure Operation with Detour
(Figure TTC-34.2)
NOTES

Guidance:

1. *This plan should be used for streets without posted route numbers.*
2. *On multi-lane streets, Detour signs with an Advance Turn Arrow should be used in advance of a turn.*
3. *Sign spacing distance should be 225'-275' where the posted speed limit is 30 to 35 mph, and 100'-200' where the posted speed is 25 mph or less.*
4. *If the road is opened for a significant distance beyond the intersection and/or there are significant origin/destination points beyond the intersection, the ROAD CLOSED (R11-2) and Detour Arrow (M4-10) signs on Type 3 Barricades should be located at the corners of intersecting closed roadway or the traveled way.*
5. *In urban areas, signs on an eight foot Type 3 barricade, should not cover more than half of the top two rails. On a four foot Type 3 barricade, a sign should not cover more than the top rail. When used alone on a four foot Type 3 barricade, the ROAD CLOSED (R11-1) sign or the ROAD CLOSED TO THRU TRAFFIC (R11-4) sign should be installed above the Type 3 barricade.[2]*

Option:

6. Flashing warning lights and/or flags may be used to call attention to the advance warning signs.
7. Flashing warning lights may be used on Type 3 Barricades.
8. Detour signs may be located on the far side of intersections. A Detour sign with an advance arrow may be used in advance of a turn.
9. A Street Name (M4-VP1a) plaque may be mounted with the Detour sign. The Street Name plaque may be either white on green or black on orange.

Standard:

10. **When used, the Street Name plaque shall be placed above the Detour sign.**

NOTES

Standard:

1. **When crosswalks or other pedestrian facilities are closed or relocated, temporary facilities shall be detectable and shall include accessibility features consistent with the features present in the existing pedestrian facility.**

Guidance:

2. *Where high speeds are anticipated, a temporary traffic barrier and, if necessary, a crash cushion should be used to separate the temporary sidewalks from vehicular traffic.*

Typical Traffic Control
Multi-Lane Shift Operation
(Figure TTC-40.2)
NOTES

Guidance:

1. *The lane shift should be used when the work area extends into either the right or left lane of a divided highway and it is not practical, for capacity reasons, to reduce the number of available lanes.*
2. *Sign spacing distance should be 1300'-1500' for Limited Access highways, and on all other roadways 500'-800' where the posted speed limit is greater than 45 mph, and 350'-500' where the posted speed limit is 45 mph or less.*
3. *If the STAY IN LANE (R4-9) sign is used, then solid 4 inch wide minimum white lines should be used.*

Standard:

4. **On divided highways having a median wider than 8', right and left sign assemblies shall be required.**
5. **Shoulder and shifting taper lengths shall be as shown in Table 6H-25 Page 6H-5.[2]**
6. **Taper length (L) shall be at the following:**

Taper Length L											
Speed Limit (mph)	Lane Width (Feet) 9	10	11	12	Remarks	Speed Limit (mph)	Lane Width (Feet) 9	10	11	12	Remarks

Shifting Tapers - full lane width shifts on Limited Access Highways shall use a 750' shifting taper for posted speeds less than 65 mph and a 1000' shifting taper for posted speeds equal to or greater than 65 mph. For all other roadways ¾ L should be used.[2]											
Shoulder Taper = ⅓ L Minimum											

7. **The minimum width of the shoulder lane shall be 11'.**
8. **The buffer space length shall be as shown in Table 6H-3 on Page 6H-5 for the posted speed limit.**
9. **A shadow vehicle with either a Type B or C arrow board operating in the caution mode, or at least one high intensity amber rotating, oscillating, or flashing[1] light shall be parked 80'-120' in advance of the first work crew. When the posted speed limit is 45 mph or greater, a truck-mounted attenuator shall be used.**
10. **For long-term work zones existing conflicting pavement markings and markers shall be removed and temporary pavement markings and markers shall be installed per Figure TTC-60.**

Option:

11. For short-term stationary work (less than 3 days duration), lanes may be delineated by channelizing devices or removable pavement markings instead of temporary pavement markings.
12. Temporary pavement markers, on a 40' center to center spacing, may be added to the tangent section between lane shifts as directed by the engineer.
13. Lane shift (W1-4 series) signs may be eliminated when geometric conditions straighten a curve or when full L is used.[2]

Signing for Project Limits
(Figure TTC-53.0)
NOTES

Support:

1. This layout depicts signing requirements for notifying motorist when they are entering and exiting a potential construction/maintenance area with a duration equal to or greater than 60 days.

Standard:

2. **The ROAD WORK AHEAD (W20-1) sign or the ROAD WORK NEXT XX MILES (G20-1 (V)) sign shall be placed far enough in advance of the project limits so that other warning signs in a series may be adequately placed prior to the condition they are warning about.**
3. **The ROAD WORK NEXT XX MILES sign shall be used for projects with activity areas greater than 2 miles in length, or when multiple work activities (such as pavement patching, guardrail installations, shoulder restoration, etc.) occur along a highway.**
4. **The distance displayed on the ROAD WORK NEXT XX MILES sign shall be stated to the nearest whole mile from the point of installation to the END ROAD WORK (G20-2 (V)) sign.**
5. **On divided highways having a median wider than 8', right and left sign assemblies shall be required.**

Guidance:

6. *For projects with activity areas 2 miles or less in length, the ROAD WORK AHEAD sign should be the first sign motorist encounter.*
7. *Sign spacing should be 1300'-1500' for Limited Access highways. For all other roadways, the sign spacing should be 500'-800' where the posted speed limit is greater than 45 mph, and 350'-500' where the posted speed limit is 45 mph or less.*

Lane Closure Operation through a Unsignalized[2] Intersection [1]
(Figure TTC-67.1)

NOTES

Guidance:

1. *Sign spacing distance should be 350'-500' where the posted speed limit is 45 mph or less, 500'-800' where the posted speed limit is greater than 45 mph.*
2. *To maintain efficient traffic flow in a flagging operation on a two-lane roadway, the maximum time motorists should be stopped at a flagger station is 8 minutes for high volume roadways (average daily traffic of 500 or more vehicles per day) to a maximum of 12 minutes for low volume roadways (less than 500 vehicles per day). For additional information see Section 6E.07.*[2]

Standard:

3. **PTRS shall be used as per Section 6F.99.**[2]
4. **Channelizing device spacing shall be on 20' centers or less 100 feet in advance of the intersection.**

Guidance:

5. *If room permits, a shadow vehicle with at least one rotating amber light or high intensity amber strobe light should be parked 80'-120' in advance of the first work crew.*
6. *If the posted speed limit is 45 mph or greater, the shadow vehicle should have a truck-mounted attenuator.*
7. *If the work space extends across a crosswalk, the crosswalk should be closed using the information and devices shown in Figure TTC-36.*

Option

8. At the stop condition intersecting roadway, additional flagger sign may be used (BE PREPARED TO STOP (W3-4)) between the ROAD WORK AHEAD and the flagger station in the proper sequence, as directed by the District[2] Traffic Engineer.
9. PTRS may be used on the intersecting roadway to enhance the work zone at the approaching intersection.[2]

PORTABLE HYDRANT ASSEMBLY

NOTES:
1. PLEASE CONTACT THE CITY OF RICHMOND CROSS CONNECTION CONTROL SPECIALIST AT (804) 646-8510 FOR AN APPLICATION, FEES, AND INFORMATION REGARDING THE USE OF THE ASSEMBLY.
2. THE BACKFLOW DEVICE IS REQUIRED TO BE TESTED AT THE TIME OF INSTALLATION.
3. DPU RECOMMENDS THE USE OF BARRICADES TO SAFEGUARD THE ASSEMBLY WHILE IN USE.
4. DO NOT OPEN THE HYDRANT INTO A STREET WHEN THE TEMPERATURE IS BELOW 32°.
5. DO NOT STAND IN FRONT OF THE ASSEMBLY WHEN OPENING THE HYDRANT VALVE.
6. DO NOT SIT ON THE ASSEMBLY.
7. DO NOT USE A DAMAGED OR DEFECTIVE ASSEMBLY.
8. DO NOT DISCONNECT OR REMOVE THE METER FROM THE BACKFLOW DEVICE.

INSTALLATION INSTRUCTIONS:
1. REMOVE THE 2½" HOSE NOZZLE CAP FROM THE HYDRANT USING A SPANNER WRENCH.
2. USING A SPANNER WRENCH CHECK THE REMAINING 2½" & 4¼" CAPS TO ENSURE THEY ARE TIGHT. THE CAPS SHOULD BE SNUG, DO NOT OVER TIGHTEN.
3. USING A SPANNER WRENCH TURN THE HYDRANT VALVE SLOWLY IN A CLOCKWISE DIRECTION TO FLUSH THE HYDRANT. ONCE CLEAR WATER IS FLOWING FROM THE HYDRANT, SLOWLY TURN THE HYDRANT VALVE IN A COUNTER CLOCKWISE DIRECTION TO CLOSE THE HYDRANT.
4. INSTALL THE HYDRANT ASSEMBLY ON THE 2½" HOSE NOZZLE BY TURNING THE CONNECTOR NUT CLOCKWISE UNTIL SNUG.
5. ENSURE THE OUTLET VALVE IS IN THE CLOSED POSITION.

4. Elongated arrows shall be in accordance with MUTCD and VDOT Road and Bridge Specifications.
5. Dimensions are from the face of curb and to the centerline of the pavement markings, unless otherwise noted.

GENERAL NOTES – SIGNING

1. Unless otherwise approved by the engineer, existing traffic signs, which are to be remove, shall remain in place until the new sign structure and critical message are in place.
2. Proposed signs and sign structures shall not impact underground existing utilities. Contractor is responsible for any distribution in Utility Service due to digging for sign structures. If Proposed sign location will cause impact to existing Utility Service, sign location shall be relocated at the approval of the engineer, at no additional cost.
3. All underground and overhead utilities shown on these plans are approximate only and may not be complete. At least 72 hours prior to beginning signing work, Contractor shall contact "Miss Utility of Virginia" at 1–800–552–7001 in order to determine the extent, location, and identify all of the utilities within the work area. If the Contractor perceives a conflict between utilities and the proposed signs, the Contractor shall notify the Engineer immediately so the conflict may be reviewed. The Contractor shall be responsible for repairing or replacing, at their own expense, any existing utilities, pavement, concrete items, ect. that are damaged during construction.

2. NO PLANT MATERIALS SHALL BE INSTALLED UNTIL ALL GRADING AND CONSTRUCTION HAS BEEN COMPLETED IN THE IMMEDIATE AREA.
3. FINAL QUANTITY FOR EACH PLANT TYPE SHALL BE AS GRAPHICALLY SHOWN ON THE PLAN. THIS NUMBER SHALL TAKE PRECEDENCE IN CASE OF ANY DISCREPANCY BETWEEN QUANTITIES SHOWN ON THE PLANT LIST AND ON THE PLAN. THE CONTRACTOR SHALL REPORT ANY DISCREPANCIES BETWEEN THE NUMBER OF PLANTS SHOWN ON THE PLANT LIST AND PLANT LABELS PRIOR TO BIDDING.
4. ALL DISTURBED AREAS NOT OTHERWISE NOTED ON CONTRACT DOCUMENTS SHALL BE SEEDED WITH PERMANENT SEED MIX AS SPECIFIED.

TREE PROTECTION

1. EXISTING TREES TO REMAIN SHALL BE PROTECTED WITH TREE PROTECTION FENCE. ERECT FENCE AS SHOWN ON PLANS PRIOR TO BRINGING EQUIPMENT OR MATERIALS ON SITE OR STARTING CONSTRUCTION.
2. CONTRACTOR SHALL NOT OPERATE VEHICLES WITHIN THE TREE PROTECTION AREA. CONTRACTOR SHALL NOT STORE VEHICLES OR MATERIALS, OR DISPOSE OF ANY WASTE MATERIALS, WITHIN THE TREE PROTECTION AREA.
3. DAMAGE TO EXISTING TREES CAUSED BY THE CONTRACTOR SHALL BE REPAIRED BY A CERTIFIED ARBORIST AT THE CONTRACTOR'S EXPENSE.

TOPSOIL NOTES

1) SOIL TESTING

(1.1) THE CONTRACTOR IS RESPONSIBLE FOR SOILS TESTING AND ANALYSIS FOR SUITABILITY FOR PLANTING AND LANDSCAPE TREATMENTS REQUIRED IN THIS CONTRACT. EXISTING OR IMPORT TOPSOIL SHALL BE PROVIDED THAT MEETS THE REQUIREMENTS BELOW OR WILL MEET THE REQUIREMENTS AFTER AMENDMENTS ARE MADE. A MINIMUM OF 3 SOIL SAMPLES SHALL BE TAKEN TO REPRESENT THE FULL RANGE OF TOPSOIL.

(1.2) SOIL ANALYSIS SHALL BE BY AN INDEPENDENT CERTIFIED LABORATORY AND SHALL INCLUDE SOIL TEXTURE, COMPOSITION, ORGANIC MATTER CONTENT, pH, SALINITY, AND FERTILITY (AVAILABLE NUTRIENTS). FOR SOILS NOT MEETING TOPSOIL SPECIFICATIONS BELOW, THE REPORT SHALL INCLUDE RECOMMENDATIONS FOR AMENDING THE SOILS TO BRING THEM INTO COMPLIANCE WITH THESE SPECIFICATIONS. THE CONTRACTOR IS RESPONSIBLE FOR THE COSTS OF SOILS TESTING AND AMENDMENTS, AND SHALL SUBMIT A COPY OF THE SOILS REPORT TO THE OWNER OR OWNER'S REPRESENTATIVE MINIMUM OF ONE MONTH PRIOR TO IMPORT OR RESPREAD OF TOPSOIL.

(2) TOPSOIL

(2.1) NECESSARY QUANTITIES OF TOPSOIL SHALL BE SUPPLIED BY THE CONTRACTOR AND APPROVED BY THE OWNER OR HIS REPRESENTATIVE. THE CONTRACTOR SHALL APPLY TOPSOIL ONLY AFTER SECURING SOIL TEST, AS SPECIFIED ABOVE, APPLYING RECOMMENDED TREATMENT THEREOF, AND RECEIVING APPROVAL.

(2.2) TOPSOIL REQUIREMENTS WILL BE MET AS FOLLOWS:

(A) ON-SITE OR OFF-SITE TOPSOIL MEETING SPECIFICATIONS PROVIDED FROM AN APPROVED SOURCE.

(2.3) TOPSOIL SHALL BE THE ORIGINAL TOP LAYER OF A SOIL PROFILE FORMED UNDER NATURAL CONDITIONS, TECHNICALLY DEFINED AS THE "A" HORIZON BY THE SOIL SOCIETY OF AMERICA. IT SHALL CONSIST OF NATURAL, FRIABLE LOAMY SOIL WITHOUT ADMIXTURES OF SUBSOIL OR OTHER FOREIGN MATERIALS, AND SHALL BE REASONABLY FREE FROM STUMPS, ROOTS, HARD LUMPS, STIFF CLAY, NOXIOUS WEEDS, BRUSH, OR OTHER LITTER. STONES SHALL NOT BE LARGER THAN 1" IN DIAMETER. IT SHALL HAVE DEMONSTRATED BY EVIDENCE OF HEALTHY VEGETATION GROWING, OR HAVING GROWN ON IT PRIOR TO STRIPPING, THAT IT IS REASONABLY WELL DRAINED AND DOES NOT CONTAIN SUBSTANCES TOXIC TO PLANTS.

(A) "A" HORIZON: "A" HORIZONS SHALL BE MINERAL HORIZONS CONSISTING OF:

(1) HORIZONS OR ORGANIC MATTER ACCUMULATION FORMED OR FORMING AT OR ADJACENT TO THE SURFACE;
(2) HORIZONS THAT HAVE LOST CLAY, IRON, OR ALUMINUM, WITH RESULTANT CONCENTRATIONS OF QUARTZ OR OTHER RESISTANT MINERALS OF SAND OR SILT SIZE; OR
(3) HORIZONS DOMINATED BY 1 OR 2 ABOVE BUT TRANSITIONAL TO AN UNDERLYING B OR C.

(B) HORIZON SUBDIVISIONS: "A1" HORIZONS SHALL BE MINERAL HORIZONS, FORMED OR FORMING AT OR ADJACENT TO THE HUMIDIFIED ORGANIC MATTER INTIMATELY ASSOCIATED WITH THE MINERAL FRACTION. THE SOIL IS A DARK OR DARKER THAN UNDERLYING HORIZONS BECAUSE OF THE PRESENCE OF ORGANIC MATTER. THE ORGANIC MATERIAL IS ASSUMED TO BE DERIVED FROM PLANT AND ANIMAL REMAINS DEPOSITED ON THE SURFACE OF THE SOIL OR DEPOSITED WITHIN THE HORIZON WITHOUT APPRECIABLE TRANSLOCATION.

(C) A2 HORIZONS SHALL BE MINERAL HORIZONS IN WHICH THE FEATURE EMPHASIZED IS LOSS OF CLAY, IRON OR ALUMINUM, WITH RESULTANT SIZES.

(D) TOPSOIL SHALL ACHIEVE OR BE AMENDED TO ACHIEVE THE FOLLOWING:
1) TEXTURE: SANDY LOAM, LOAM, OR SANDY CLAY LOAM.
2) TOPSOIL SHALL HAVE A pH IN THE RANGE OF 5.5 TO 7.0 PRIOR TO MIXING WITH AMENDMENTS. REFER TO SEEDING NOTE 5.3 AND PLANTING NOTE 4.5 FOR pH RANGE AFTER AMENDMENT. REPORT FROM INDEPENDENT TEST LAB IS TO INCLUDE RECOMMENDATION TO BRING pH TO LEVELS AS NOTED IN SEEDING AND PLANTING NOTES.
3) SOLUBLE SALT LEVEL: LESS THAN 844 PPM.
4) ORGANIC MATTER: 3-5%.

SEEDING NOTES

THIS SECTION INCLUDES, BUT IS NOT LIMITED TO; TILLAGE, PH BALANCING, FERTILIZING, WATERING, SEEDING, MAINTENANCE MOWING, AND MULCHING OF ALL DISTURBED AREAS WITHIN THE CONTRACT LIMIT LINES NOT OCCUPIED BY STRUCTURES, PAVEMENT, OR PLANTING BEDS.
